1. We support progress toward open and accountable governance in countries and communities around the world. We believe that citizens have the right to shape the rules that govern their lives. Moreover, when governance is open and citizens are part of the process, societies are better able to address challenges such as corruption, poor service delivery, environmental degradation, and persistent poverty. Open and accountable governance is fundamental to inclusive and sustainable development.

2. Research and practical reform experience yield three key insights on how countries move toward open governance. First, progress toward more open governance is inherently political. As such, our approach to supporting progress must be about understanding and engaging with the politics of governance reform. Second, the actors within a given governance context play the primary role in driving governance reform. Therefore, our focus should be on supporting domestic champions of open governance. Third, there is no universal blueprint for governance reform. Therefore, our work should support reformers as they try, learn and adapt their way toward reforms that work in their context.

3. We put these insights into practice through three mutually reinforcing streams of work:

   - **Research and data.** We work with a global network of researchers who gather data and conduct research on countries’ journeys toward more open governance. We work with these country-level partners to produce original insights through cross-country comparisons, indicator-based assessments, political economy analysis, case studies and action research.

   - **Country-level engagement.** We partner with reformers in selected countries to facilitate learning and adaptation around opening governance. Our approach uses a mix of structured reflections, political analysis, network mapping, and skill building to strengthen the relationships and build the political capital that is needed to drive progress towards more open governance.

   - **Global advocacy.** We aim to influence global conversations around open governance using insights from our comparative research and country-level engagement. We focus on key issues, including fiscal governance and money in politics, where policy changes within institutions like the G20 or the World Bank can improve global norms and practices.
4. We focus on four thematic areas which are central to the open governance agenda:

- **Data, learning and citizen engagement.** Our work on this theme aims to shape policy and practice as regards the role that data, learning and citizen engagement can play in supporting progress toward open and effective governance. It includes projects on learning in the transparency and accountability space; citizen-generated data; using indicator-based assessments such as the Africa Integrity Indicators and our US-focused work on State Integrity to support policy dialogue; and, designing governance assessments to maximize their value to country-level learning.

- **Multi-stakeholder governance initiatives and the Open Government Partnership in particular.** Our work on this theme aims to enhance the effectiveness of initiatives including the Open Government Partnership by strengthening their learning functions and making the most of their interconnections. It includes the comparative case studies we are leading on open government reformers’ attempts to lever the power of OGP.

- **Open fiscal governance.** Our work on this theme aims to improve the ability of citizens to “follow the money”, that is, to track and shape the use of public resources. It includes citizen-centered diagnoses of the fiscal governance landscape, including in Mexico, and advocacy intended to shape policy and practice on fiscal governance.

- **Money, politics, and transparency.** Our work under this theme aims to inform efforts to improve the regulation of campaign finance. Building on our Campaign Finance Indicators project, it increasingly extends beyond data collection to supporting country-level policy dialogues about campaign finance regulation.
